Proud app developer for phones / desktop & teacher

- Teacher of Laravel to university students.
- Phone apps and desktop apps developer using Meteor / Electron

TOP PROJECTS

CHARTS | STATISTICS GENERATION FOR LARAVEL - PHP

Author, Team Leader & Developer

I created Charts, a Laravel package that is able to generate up to 57 different charts with the same code. It also supports realtime statistics & database generated charts. This package is currently having a lot of attention on github since it helps a lot of website developers and the community is starting to work with me to improve the features it can support. (+50.000 downloads & +1000 stars on github)

LARALUM | LARAVEL ADMINISTRATION PANEL - PHP

Author, Team Leader & Developer

I've been working in Laralum since January 2016 and it's one of my best projects so far. It includes everything you need to handle any website administration. It's a modular CMS created to adapt any website with a fluent API and a very clean interface. You install what you want right when you need it. It's currently being used by a few companies nowadays to manage their website.

INVOICES | PDF INVOICES FOR BUSINESS - PHP

Author & Developer

Invoices is a PHP package used to generate custom and well formatted PDF invoices to your clients. It's well integrated into laravel and includes lots of features to make the code cleaner while keeping all the information well organized and customizable. It also includes tax calculation based on the currency. It allows rendering the PDF in the browser and downloading it as well.

MORE INFORMATION

I'm a very happy person and an open source lover, I like to build for everyone with open source tools.

I love website development with laravel and modern app development with javascript using electron / meteor. I would define myself as a full-stack developer ready to learn everything I feel interested in.

I have a driving license to move myself although I prefer to sit in front of the computer and hack into the future.
